Vestibular Rehabilitation and Balance Issues

If you suffer from frequent falls, vertigo, imbalance, dizziness, or migraines, you may be experiencing a problem with your main balance system known as your vestibular system.

It is important to receive effective physiotherapy to avoid compounding the difficulties caused by imbalance issues, including a tendency to fall and create more injuries.

Dizziness and imbalance issues can take away your independence and curtail your ability to live a full life.

We have achieved success with a variety of therapies that help us get to the root of problems with the vestibular system, and work with you to solve them.
